OCEAN NETWORKS CANADA

Discover the ocean. Understand the planet.

BRITISH COLUMBIA - CANADA

**WHAT DO WE HAVE?
WHAT DO WE NEED?**

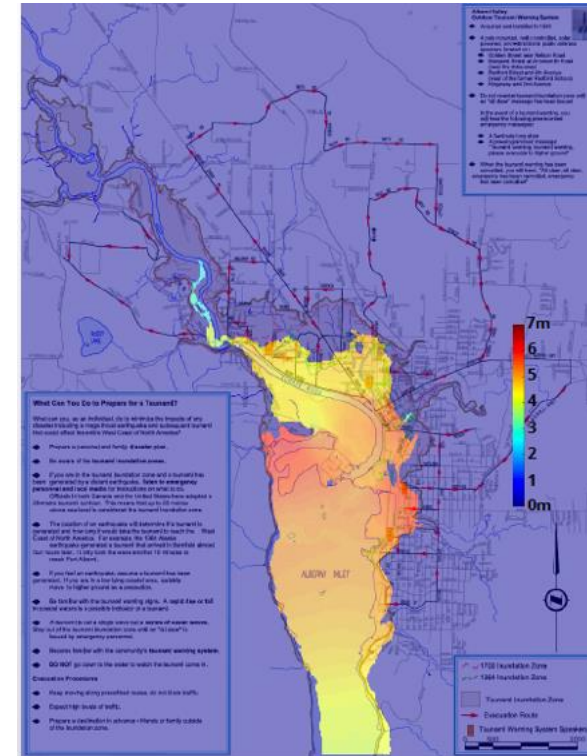

TSUNAMI WAVE MODELS

Wave
model

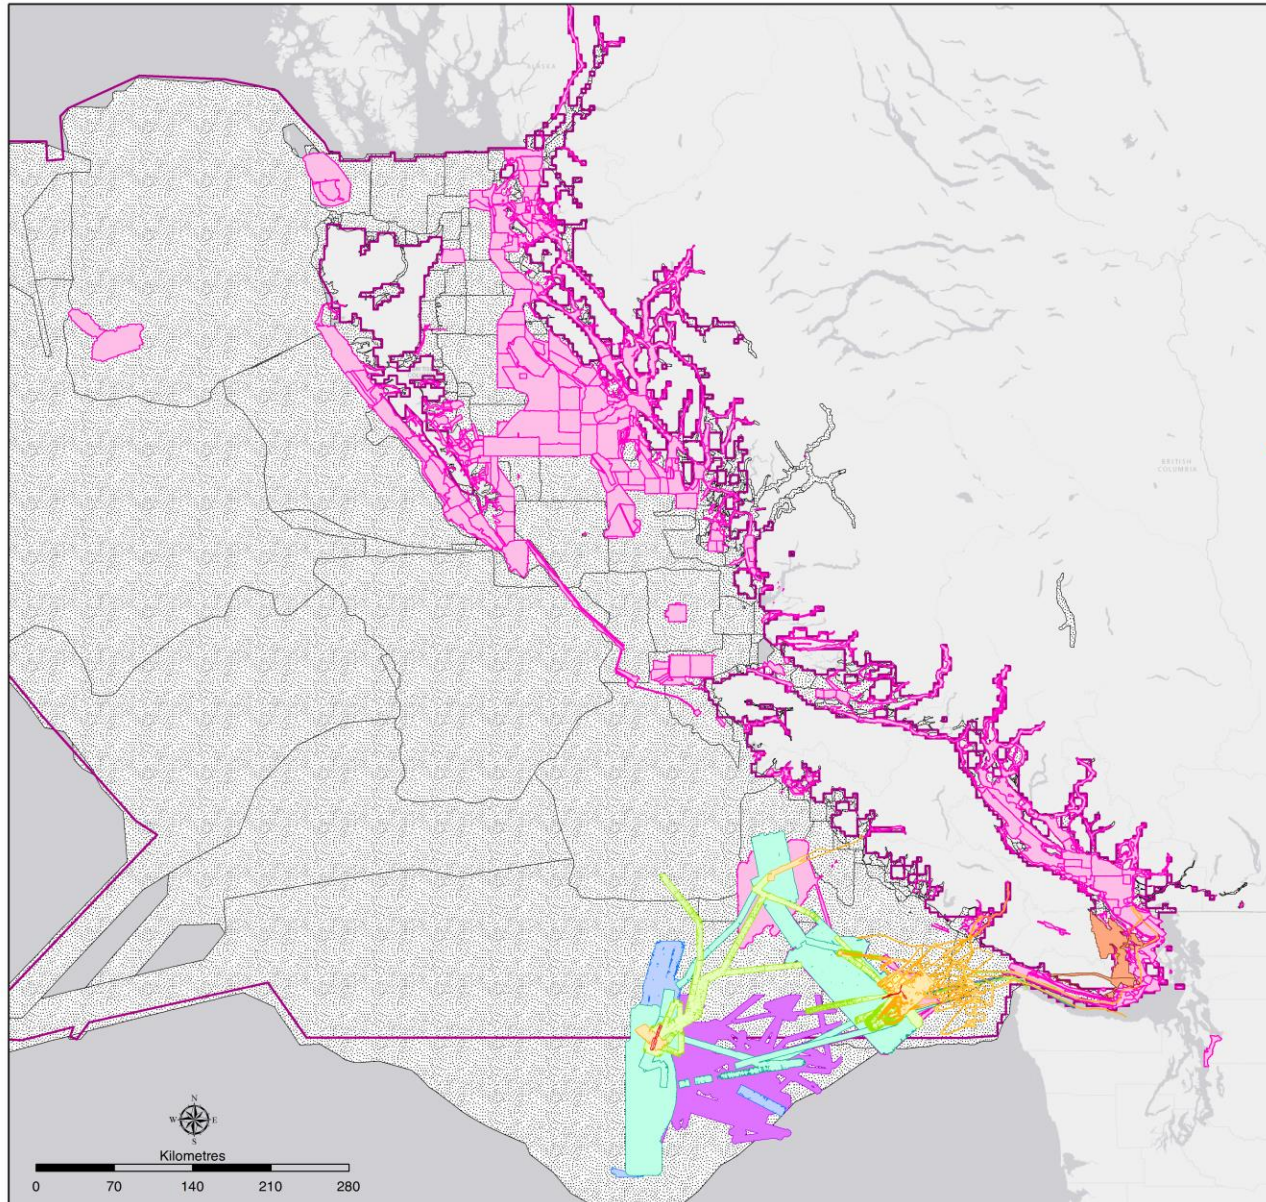

- Wave height
- Inundation maps
- Maximum currents
- Time of arrival
- Duration of events

DIGITAL ELEVATION MODELS (DEM)

Bathymetry Coverage - West Coast British Columbia

Description: This map shows the footprint of the bathymetry datasets currently held by Ocean Networks Canada and/or the Canadian Hydrographic Service (CHS). Many of these data sets are externally owned and have constraints. Please see attached spreadsheet for more information.

Geodetic Tie to Tidal Data

We need:

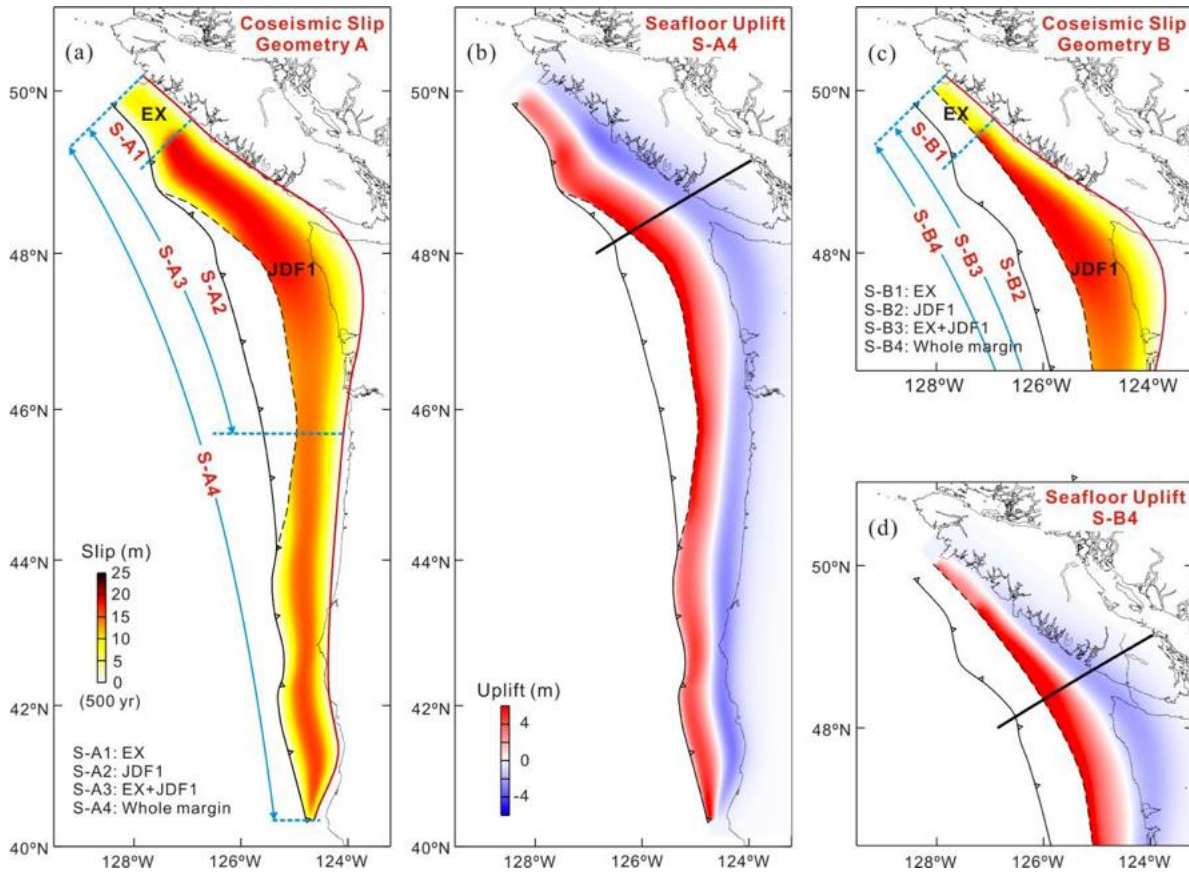

1. **More current standardized data:** bathymetry and topography
2. **Better data exchange**
3. **Keep improving tidal data correction**

We have:

1. Data for quite a few areas at **fine resolution**
2. Data for most of BC at **coarse resolution**

SOURCE MODELS

Gao et al. (submitted)

NEW MODELS FOR CASCADIA!

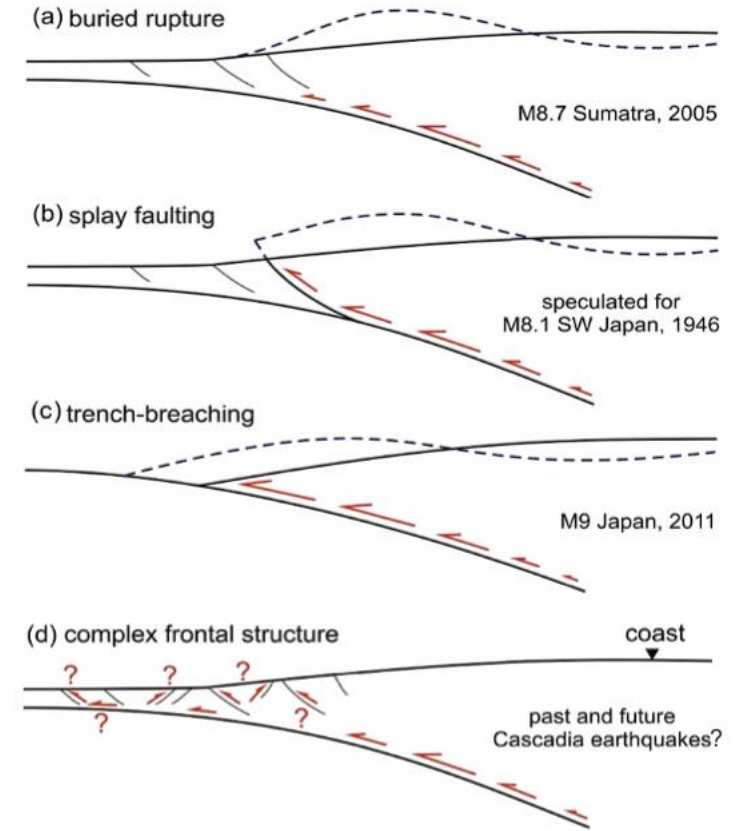

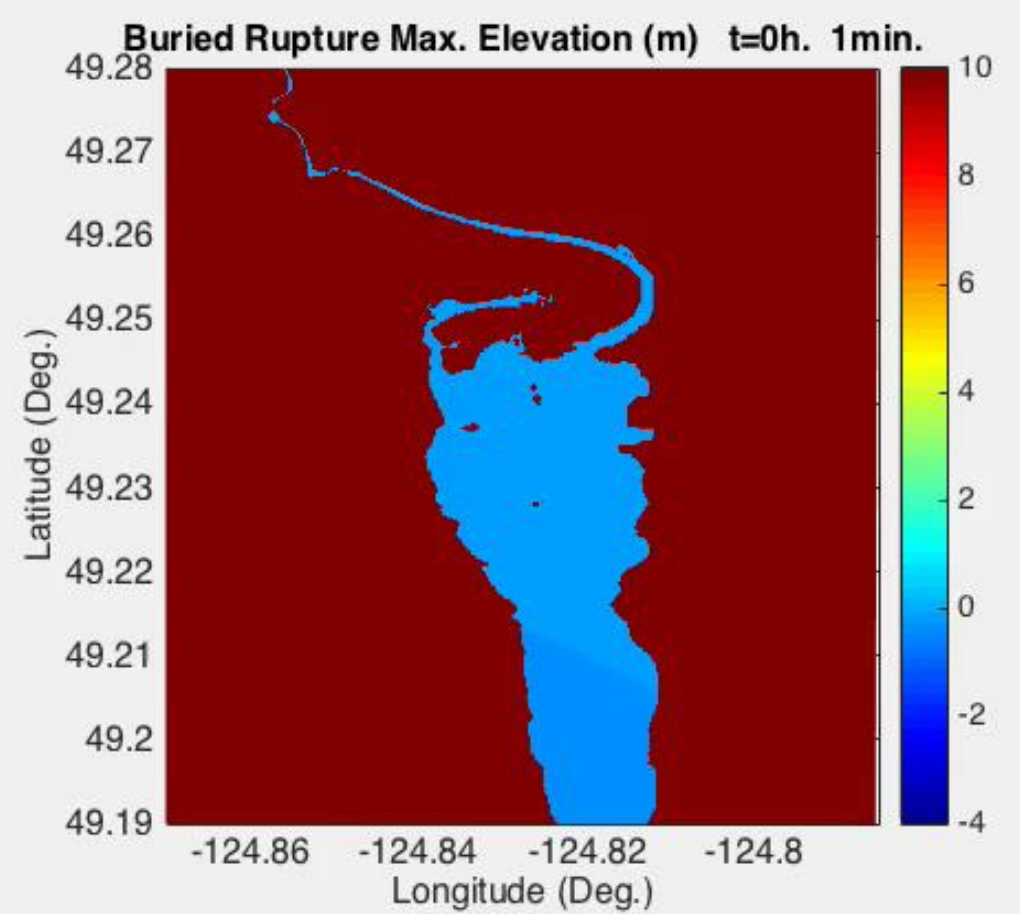

Fig. 1.1. Tsunami-genic rupture scenarios of subduction earthquakes [Wang and Tréhu, 2016].

We need:

1. More data for **probabilistic analysis**
2. A **source library** – collaborate with US?

We have:

1. **New models** that consider more and worst cases than before

Middle School

We need:

1. **Standardized** approach
2. **Benchmarking** efforts – all hands on deck
3. Easy to understand formats – **new visuals**
4. **Mind the gap** – Compliance US alerts

We have:

1. **Models** available that have been benchmarked
2. **Results** for many areas
3. **Basin frequencies** analysis

**WHAT CAN WE DO WITH
WHAT WE HAVE?**

1. Identify **resonant basins** and calculate their frequency
2. Identify **priority areas** for data collection
3. **Educate** users/public
4. **Identify weaknesses and quantify them** – engineering approach

1. How can we translate what we have into **risk**?
2. How can we integrate what we have in the **civil code**?
3. For areas that **need data, what's the strategy**?
4. For areas with **enough data, what's the next step**?
5. How can we **make this work** for industry, academia, First Nations, non-for-profits and government? Guidelines?

THANK YOU!

Ocean Networks Canada is funded by the Canada Foundation for Innovation, Government of Canada, University of Victoria, Government of British Columbia, CANARIE, and IBM Canada.
